### DETAILED ACTION

1. Upon further consideration following is the rejection of the claims. For this reason this office action is not made final.

#### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 13-14 and 16-29 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The upper range of oxygen content in the niobium powder "10.2%" by mass was not supported by the specification as originally filed. The disclosed oxygen content of 9.6% by mass in comparative Example 2 of Table 1 and 10.2% by mass in comparative Example 4 of Table 2 are noted. They are comparative examples and do not represent applicant's invention. The limitation of oxygen in niobium powder of more than 9% by mass therefore introduces new matter.

#### ***Double Patenting***

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1742

5. Claims 14, 16-29 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,671,164. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patent claims a granulated niobium powder and capacitor comprising a sintered body formed from the niobium powder, wherein the niobium powder is obtained through granulation of niobium powder having mean particle size of about 0.05 to about 3 microns and contains oxygen in an amount of 5,000 to 60,000 ppm or (0.5 to 6.0% by mass) and nitrogen in an amount of 300 to 9,000 ppm. Since the niobium powder claimed in the patent contains oxygen and nitrogen in the amounts that overlap those claimed in the instant application and it would have been obvious that the niobium powder in the patent is comprised of powder having particle size as claimed when powder having the claimed size is granulated, the niobium powder in the patent would inherently have the claimed specific surface area.
